Transportation Research based on machine learning and data-driven methods

➤ **Revealing New York taxi drivers' operation patterns focusing on revenue**

- Developed a method for classifying drivers into 3 groups based on their revenue: top, ordinary, low earner
- Excavated the population operation patterns of different taxi driver groups through big data analytics

➤ **Influence of on-demand ride-sourcing vs. traditional taxi based on machine learning and big data analytics**

- Uncovered the differences between taxi service and ride-sourcing using big data analysis and clustering
- Applied non-negative matrix factorization (NMF) to obtain basis patterns of Taxi, Hitch, and Express service

➤ **Influence of on-demand ride-sourcing on vehicle emissions with big data analytics and PHEM model**

➤ **Fundamental research on intelligent parking guidance and recommendations based on machine learning**

- Forecast models of travel time to parking lots (*Random Forest*); Guidance & optimization models for parking
- Personalized recommendation research on parking (Collaborative Filtering and Content-based algorithm)

➤ **Study on key technology in Intelligent Vehicle Infrastructure Cooperative Systems (IVICS) (863 Program)**

- Contributed to the design report of the basic technical framework and the overall demonstration of IVICS
